SUBJECT: Boil Advisory ISSUED for 1300 Block of Wellesley Avenue

STEUBENVILLE –March 24, 2020 A Boil Advisory has been issued for the 1300 block of Wellesley Avenue. This boil advisory is due to the replacement of a fire hydrant and valve. Until further notice, customers in the area should vigorously boil the water prior to consumption. Repairs have been completed, and samples will be sent for analysis to indicate there is no contamination as a result of this work, another notice will be issued informing customers that this advisory has been lifted.

Water depressurization that interrupt customer's water service may also cause additional disruptions in water quality, including discolored water and/or potentially a temporary increase in lead levels in drinking water.

As a standard practice USEPA recommends the following actions to reduce possible lead exposure in drinking water:

If water has not been used for several hours, run the tap until there is a noticeable temperature drop. Then run the water for 30 seconds to 3 minutes before using it for drinking or cooking. This helps flush water that may have contained lead that may have leached from the plumbing.

Use cold water for cooking, drinking, and preparing baby formula. Boiling the water will not reduce lead. **Clean your faucet aerator regularly.**
